

Calibration curves, three ring conventions — EIV multivariate, T_0 -shift

(a) top layer: culture + mesocosm

(b) bottom layer: coretop, at median
 $G_{2/3} = 4.42$, $\text{NO}_3^- = 2.26$

(c) Coretop T_0 -shift posteriors (tx.GHEB.sst.sri03.G23-N1p0) — median, 68% and 95% CI.
 γ in °C per predictor unit; R^2 evaluated at the observed predictors, so it is the same quantity as Fig. 7b.
