
Calibration curves, three ring conventions — EIV multivariate, T_0-shift
(a) top layer: culture + mesocosm
(b) bottom layer: coretop, at median
$G_{2/3}$ = 4.43, NO_3^- = 2.21

(c) Coretop T_0-shift posteriors (tx.GHEB.sst.sri03.G23-N1p0) — median, 68% and 95% CI.
γ in °C per predictor unit; R^2 evaluated at the observed
predictors, so it is the same quantity as Fig. 7b.
